Re: *WiMAX Forum Petition Proposing Rules for the Aeronautical Mobile
Airport Communications Systems, RM-11793*

Dear Ms. Dortch:

On behalf of Symantec Corporation, I write to express my strong support for the Petition filed by the WiMAX Forum proposing services rules for the Aeronautical Mobile Airport Communications Systems (AeroMACS).¹ The widespread and expeditious deployment of AeroMACS holds the potential to bring significant benefits to American airports, air travelers, and equipment manufacturers. The Commission should therefore move quickly to adopt a Notice of Proposed Rulemaking proposing service rules for AeroMACS.

AeroMACS is an airport surface communications system that will allow for increased volumes of data exchanges at airports around the country. As the demand for high-bandwidth, data intensive services and applications continues to grow, the global aviation community has adopted AeroMACS to help meet these needs for airport surface communications. The FCC has adopted globally harmonized allocations for AeroMACS in the 5000-5030 MHz and 5091-5150 MHz bands, but the lack of service rules has hindered the widespread deployment of this service in the United States.

The deployment of AeroMACS will result in a multitude of benefits for American airports and air travelers. First and foremost, the higher bandwidth communications services and applications provided by AeroMACS will establish a new framework for airport surface communications designed to advance the safety and regulatory of flight. For example, AeroMACS can assist in providing pilots up-to-date information on flight plans, maps, and weather forecasts. In addition, airport operations personnel will be able to use AeroMACS networks to perform a host of tasks ranging from coordinating gate operations to snow removal to support for emergency services.

The adoption of service rules will also help promote manufacturing and investment in new AeroMACS products and services. Many equipment manufacturers already have commercial AeroMACS kits available, but large-scale manufacturing remains contingent upon

¹ See WiMAX Forum Petition for Rulemaking to Adopt AeroMACS Service Rules (filed Mar. 31, 2017) (“Petition”).

the adoption of service rules. Moreover, the adoption of service rules will spur investment in new and innovative products and services that can be deployed on AeroMACS networks.

Symantec Corporation (NASDAQ: SYMC), the world's leading cyber security company, allowing organizations, governments, and people to secure their most important data wherever it lives. Enterprises across the world rely on Symantec for integrated cyber defense against sophisticated attacks across endpoints, infrastructure, and cloud. Founded in 1982, Symantec has evolved to become the global leader in cyber security, with more than 11,000 employees in more than 35 countries. Operating one of the world's largest cyber intelligence networks, Symantec sees more threats, and protects more customers from the next generation of attacks.

Symantec Corporation is a WiMAX Forum member and is working to help secure AeroMACS networks at both national and international levels. Symantec is the largest Public Key Infrastructure (PKI) service provider globally, and provides a secure and effective PKI for AeroMACS -- which is essential for ensuring that all communications on the airport surface are secure.

The Public Notice released by the Commission seeks comment on a number of issues proposed in the Petition.² Symantec Corporation responds to each of these issues as follows:

Licensing scheme and use of a Channel Manager to determine eligibility and coordinate non-Federal channel usage. We support the proposal that non-Federal eligible users share available channels under the auspices of a single Commission-appointed nationwide Channel Manager. This licensing scheme is the most efficient way of optimizing the limited spectrum in these bands. A Channel Manager, with oversight from industry participants such as the airport and airline communities, is best positioned to allocate spectrum fairly on a non-discriminatory basis. Relatedly, we support the proposal that non-Federal eligible users be "licensed by rule" under Part 95 and be able to register sites and secure AeroMACS channels by applying to the Channel Manager. This licensing approach is the simplest, fairest and most economical way to assign AeroMACS channels. Moreover, this approach reduces the possibility that an entity "warehouses" spectrum it does not need at a particular airport.

Eligibility of non-Federal entities to use AeroMACS. We support the Petition's proposed non-exhaustive list of eligible users, which includes airports, airlines, airline navigation service providers, and aeronautical communications network providers. This list of eligible users includes all of those entities who are likely to utilize the spectrum in furtherance of the safety and regularity of flight mandate for which the spectrum was originally allocated. Robust access to this spectrum by a variety of users will ensure that we realize the envisioned benefits of safety and regulatory of flight.

Appropriate technical characteristics and equipment certification requirements. We support the proposed technical characteristics and equipment certifications rules. These proposed rules are based on the internationally adopted standards and technical rules for equipment that will be certified to operate in the band. Specifically, the technical rules for AeroMACS are derived from Standards and Recommended Practices of the International Civil Aviation Organization and Radio Technical Commission for Aeronautics published documents. Adoption of such rules will aid in efforts to globally harmonize operations in this band, thus speeding deployment of AeroMACS networks worldwide.

Finally, Symantec Corporation wishes to express its deepest appreciation to the WiMAX Forum for not only submitting this important Petition, but also for its continued leadership in AeroMACS on a worldwide level. AeroMACS truly has no better informed or influential advocate, and we are well served by their direction.

Thank you for seeking comment on the important issues raised in the Petition. In light of the significant benefits that will be realized by the swift and widespread deployment of AeroMACS networks, Symantec Corporation urges the Commission to expeditiously adopt a Notice of Proposed Rulemaking proposing service rules for AeroMACS.

Sincerely,
Geoffrey Noakes
